TalaRide

Remember every ride.

A digital ride record system for everyday street-hailed pedicabs and tricycles in Tagum City.

Tagum City Focus · Privacy by Design · No Driver App Needed

STREET FLEET

CITY TERMINAL

1 THE PROBLEM

Street-hailed pedicab and tricycle rides usually leave no digital record. Passengers may forget the plate number, MTOP number, ride time, or vehicle details.

This becomes a problem when they leave an item inside, need to identify the vehicle later, or want to report an incident.

2 BENEFICIARIES

Primary:

Students, workers, night commuters, regular pedicab passengers, visitors.

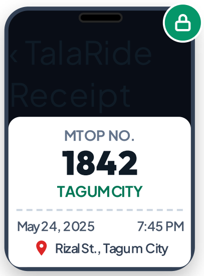
Secondary:

Families, drivers, transport associations, Tagum Traffic Management Office, schools, LGUs.

3 THE SOLUTION

TalaRide lets passengers scan a street-hailed pedicab or tricycle using their phone camera.

The app detects visible vehicle identifiers such as the plate, MTOP, or body number and creates a private digital ride receipt with date, time, and optional location.



4 HOW IT WORKS

1 Scan — Point camera at vehicle.

→

2 Identify — AI/OCR reads plate, MTOP, or body number.

MTOP NO. 1842 TAGUM CITY

→

3 Confirm — Passenger checks the details.

MTOP NO. 1842 TAGUM CITY

→

4 Start Ride — Digital ride receipt is created.

Ride Started · MTOP NO. 1842 · May 24, 2025 · 7:45 PM

→

5 Save — Ride stays in private history.

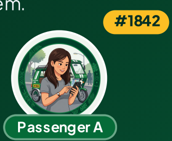
My Rides
- 1842 May 24, 7:45 PM
- 1256 May 22, 6:30 PM
- 0775 May 21, 8:09 PM

5 COMMUNITY LOST-ITEM RELAY

Turning a ride record **into a community safety net.**

- ✓ No Driver App
- ✓ No QR Code
- ✓ No Booking Required

1. **Passenger A** scans Pedicab **#1842** and later reports a lost item.



→

2. The lost-item request becomes linked to that vehicle.

Lost Item Reported
Linked to Pedicab #1842

→

3. If another TalaRide user later scans the same vehicle, the app can send a privacy-safe relay prompt.

→

4. A privacy-safe notification helps the item find its way back.

TalaRide · now
Ride saved: A previous passenger may have left an item in this vehicle.

6 KEY FEATURES

- Smart Ride Scanner
- Digital Ride Receipt
- Ride History
- Lost Item Mode
- Community Relay
- Trusted Contact
- Location Context
- Privacy First

7 EMERGING TECHNOLOGIES

- Computer Vision
- OCR
- On-device AI DeepSeek Gemma
- Geospatial Technology
- Smart Matching Engine
- Privacy-by-Design Architecture

8 TECH STACK

React Native	OpenCV
Expo	Supabase
TypeScript	SQLite
VisionCamera	MapLibre / OSM
ML Kit / LiteRT	Expo Notifications

PROJECT GOAL

To turn an ordinary street-hailed ride into a searchable digital ride record using computer vision and mobile technology.

TalaRide — Remember every ride.
Your ride may be informal. Your record doesn't have to be.
